## 75<sup>th</sup> VJ Cherry Tree Discussion Update

The timing of VJ Day is unfortunately not viable for a mass planting of trees therefore the committee would suggest that we aim to plant either one or two cherries as the ceremonial trees on VJ day and follow this up with the planting of the rest in October/November when they will be dormant (allowing the roots more time to grow) and it is possible that we will get more rain meaning that they will need less watering. It would therefore be practical to plant the ceremonial trees in location where we have permanent planting staff who can water them regularly, It would also be positive to have a planting at each end of the town.

As the aim is to have an event in Kensington Gardens, it would therefore seem sensible to have one of the ceremonies there along with the opening of the Japanese Garden as we don't have another park with a dedicated member of staff in the south of the town.

In the north of the town we have dedicated staff at Belle Vue and Sparrow's Nest and also at the Denes Oval. Belle Vue is heavily planted and has already had the Peace Garden, Sparrow's Nest has new planting planned in which cherries could be integrated however it has already had the Charter Oak planted within it. The Denes Oval has not had any new planting and this could possibly be tied into the restoration of the wall as a project for 2020 under the auspices of loan to repair the wall so the two could be done in conjunction.

This is a discussion paper and may need scaling down or spreading over a period of time and will need costing.

## **Possible Locations for Cherry Trees and Types**

| Site           | Location  | No/Type |
|----------------|---|---------|
| Sparrow's Nest | Recommendation  |         |
|                | Prunus x subhirtella 'Autumnalis Rosea' (Winter Garden)   | 1       |
|                | Prunus mume 'Beni-chidori' (Winter Garden)                | 1       |
|                | Prunus 'Fragrant Cloud' (Sensory Garden)                  | 1       |

| Prunus x yedoensis Ivensii                    |  |  |

All of those listed in the table above are available from UK nurseries and should be UK grown Which meets our climate and environment criteria but also reduces the risk of bringing in diseases which are threatening to find root in the UK.

The particular variety of Prunus recommended has been based on the following criteria, as well as to provide as wide a variety as possible:

- Space
- Location
- Exposure
- Use and nature of location
- Other species within the area
- Colour of flower
- Autumnal Interest
- Colour of leaf
- Colour and texture of bark

5ft – 6ft would probably be an optimum planting size as at that height they are generally mature Enough to withstand some abuse but young enough to adapt more quickly to a new location and require less watering and care during their initial few years of planting. Going much larger would Probably require ongoing regular watering over a year or two whereas this size of tree, planted in the late autumn may even fend for itself and only need watering in very dry periods over the first year.

Forms of Prunus that are more regularly planted may be cheaper to buy and going to a wholesale nursery or discussing a large order may result in a significant saving over online prices. The standard price online for trees between 5ft – 6ft is around £50, some are higher and others may be possible to buy at significantly less.
